

HTML - Quotation and Citation Elements, Comments

Tag	Description
<code><abbr></code>	Defines an abbreviation or acronym
<code><address></code>	Defines contact information for the author/owner of a document
<code><bdo></code>	Defines the text direction
<code><blockquote></code>	Defines a section that is quoted from another source
<code><cite></code>	Defines the title of a work
<code><q></code>	Defines a short inline quotation

1. `<abbr>` - Abbreviation or Acronym

- **Description:** Defines an abbreviation or acronym. Use the `title` attribute to provide the full form.
- **Example:**

```
<p>The <abbr title="World Health Organization">WHO</abbr> was founded in 1948.</p>
```

2. `<address>` - Contact Information

- **Description:** Defines contact information for the author or owner of a document. Typically rendered in italics.
- **Example:**

```
<address>  
  Written by John Doe.<br>  
  Visit us at:<br>  
  Example.com<br>  
  Box 123, City<br>  
  Country  
</address>
```

3. `<bdo>` - Bi-Directional Override

- **Description:** Overrides the default text direction. Use the `dir` attribute to specify direction (`ltr` for left-to-right or `rtl` for right-to-left).
- **Example:**

```
<p><bdo dir="rtl">This text will be written from right to left.</bdo></p>
```

4. `<blockquote>` - Block Quotation

- **Description:** Defines a section that is quoted from another source. Browsers typically indent it.
- **Example:**

```
<blockquote cite="https://example.com">  
  This is a long quotation from another source.  
</blockquote>
```

5. <cite> - Title of a Work

- **Description:** Defines the title of a creative work (e.g., a book, poem, song, movie). Typically rendered in italics.
- **Example:**

```
<p><cite>The Mona Lisa</cite> was painted by Leonardo da Vinci.</p>
```

6. <q> - Short Inline Quotation

- **Description:** Defines a short inline quotation. Browsers usually add quotation marks around the text.
- **Example:**

```
<p>She said, <q>This is a short quote.</q></p>
```

Here's a summary of **HTML Comments** based on W3Schools:

HTML Comments

- HTML comments are used to add notes or explanations within the code that are not displayed in the browser.
- Comments are ignored by the browser and are only visible in the source code.

Syntax

- HTML comments start with <!-- and end with --> .
- Example:

```
<!-- This is a comment -->  
<p>This is a paragraph.</p>
```

Multi-Line Comments

- Comments can span multiple lines.
- Example:

```
<!--  
    This is a multi-line comment.  
    It can span several lines.  
-->  
<p>This is a paragraph.</p>
```

Commenting Out Code

- Comments can be used to temporarily disable parts of the code.
- Example:

```
<p>This is a paragraph.</p>  
<!-- <p>This paragraph is commented out.</p> -->
```

Conditional Comments (Deprecated)

- Conditional comments were used in older versions of Internet Explorer to target specific versions of the browser.
- They are **no longer supported** in modern browsers.
- Example (for historical reference):

```
<!--[if IE 8]>  
  <p>This is only shown in Internet Explorer 8.</p>  
<![endif]-->
```
